FCC
CONSULTING SERVICES

Capability Statement

FCC Consulting Services LLC (FCC) was founded to provide professional information technology consulting services to the financial, telecommunications, healthcare and manufacturing industries in both the public and private sectors. FCC provides a comprehensive approach to our product mix and service offering and we are organized based on functional expertise and core competencies.

DUNS: 080318382

NAICS CODES:
511210, 541512, 541611, 541511, 541513, 541519

CERTIFICATIONS:
- SBA 8A
- DBE – NY & NJ
- SBE – NY & NJ
- MBE – NY
- NMSDC Certified

Core Competencies

Professional Services
- Project Management
- System Integration
- Deployment & Installation
- Migration

Technology Services
- Technical Support
- Wireless Network Assessments
- Infrastructure Assessments
- Premise Wiring
- Backup & Recovery
- Cyber Security

Technology Solutions
- Drone Infrastructure Inspections
- "Tech Ready" Construction Trailers
- Cloud Service Procurement
- IT Hardware Procurement

Our ability to establish and maintain effective communication, our ability to establish rapport with our clients, and our ability to transfer our knowledge and experience to our clients is what sets us apart from our competition. We offer a level of practical experience, know-how as well as technical and managerial expertise that provides our clients with the assurance that FCC is a professional high quality-consulting firm that is committed to ensuring their client's success by delivering projects on time and within budget.

Clientele

FCC clients include Fortune 500 companies, startup companies and community organizations. The sizes of our contracts range from 100K to 5M. The following is a partial listing of our clients:

- City of Trenton, New Jersey
- Hunter Boots North America, LLC.
- S&P Global
- McGraw Hill Financials
- INCResearch Inc.

FCC Consulting Services
184 S Broad Street Trenton, NJ 08608

Past Performance

During the time that I have worked with FCC they have become a valuable part of our organization. To say they are experts in their disciplines is an understatement. More importantly to me, they have made experts of those around them by guiding the activities of both City employees and other consultants alike. They have action oriented people who think out of the box and have developed solutions to resolve numerous problems.

Terry McEwen,
Business Administrator, City of Trenton

FCC Consulting was hired as project managers for the configuration, enhancement and global implementation of Oracle's EBS Financial suite of applications. In addition to managing the day to day activities of the project, FCC was invaluable in providing functional and technical expertise throughout the entirety of the project. If you are looking for a company that can provide project managers who have the ability to effectively work with multiple stakeholders, who are skilled at using project management tools and who know how to "make it happen" regardless of the challenges or circumstances, then I would strongly recommend hiring FCC Consulting services.

Kevin Gribbon
VP of Information Systems, INCReserach Inc.

Cyber Security

The more you know about your vulnerabilities and security controls, the more you can strengthen your organization with effective procedures for governance, risk and compliance. With the growth in cyber-attacks and data breaches costing business and the public sector millions every year, cyber security is now high on the strategic agenda.

It is our job as information risk, security and compliance specialists to keep our customers protected in today's dynamic risk environment. Whether you are looking for advice, testing or auditing services, our elite experienced team and proven approach keeps you protected with future-proofed advice delivered in plain English.

For more information or to find out how we can help you with your Cyber Security needs, contact us:

Trenton, NJ 08608

Internal Network Vulnerability Audits

Part of auditing is ensuring that organizations have implemented controls. This means that preventative tools such as firewalls and antivirus software have been put in place. It also means that awareness efforts have been made, and that user education about password construction and backups has been provided. The FCC security analysts assess your entire network infrastructure for vulnerabilities by performing internal network vulnerability tests. Typically, this assessment will include examining everything from servers, desktops, and group policy, to the configuration of networking devices and firewalls.

Penetration Testing

The main objective of penetration testing is to identify security weaknesses. The FCC security analysis conduct sophisticated penetration tests that are used to identify how a potential attacker can cause a threat to your system from outside of your network. Additionally, we use these tests to validate your organization's security policy, its adherence to compliance requirements, its employee's security awareness and the organization's ability to identify and respond to security incidents.

Typically, the information about security weaknesses that are identified or exploited through pen testing is aggregated and provided to the organization's IT and network system managers, enabling them to make strategic decisions and prioritize remediation efforts.

Cyber Security Employees Training

Empowering your employees to recognize common cyber threats can be beneficial to your organization's computer security. Security awareness training teaches employees to understand vulnerabilities and threats to business operations. Your employees need to be aware of their responsibilities and accountabilities when using a computer on a business network.

FCC provides new hire training and scheduled refresher training courses on a regular basis to assist your organization in creating a data security culture.

FCC
CONSULTING SERVICES

Technology Ready Construction Trailers

FCC Consulting Services (FCC) eases your mobile office and equipment decision-making process and provides a complete, hassle-free, cost-effective telecommunications network solution for all types of building sites, commercial businesses and residential properties. Our services and solutions allow you to quickly organize administrative tasks and delegate essential details for remote access so that you can focus on the more important aspects of your project's mobilization.

For more information or to find out how we can help you with your technology needs, contact us:

FCC Consulting Services
184 S Broad Street
Trenton, NJ 08608

Range of Services

FCC provides complete outsourcing and delivers a comprehensive range of telecommunications services and security solutions that we coordinate, set up and install. This includes the following:

1. **Setup and Configuration of:**
   - Telephones
   - Desktops
   - All-In-One Printers (Scan-Print-Copy-Fax)
   - Site Surveillance & Security
2. **Internet Access, Coordination & Installation**
3. **Local Area Network (LAN) Design and Installation** (Wired and Wireless)
4. **Equipment Removal at Project Completion**

In addition, for the duration of the project, you will receive:

5. **Unlimited Local and Long Distance Phone Service**
6. **Maintenance Support**

Lower Initial and Ongoing Cost of Ownership

FCC is uniquely-positioned to provide you with the setup and maintenance of a custom phone system and computer network infrastructure. This eliminates the need for you to purchase and maintain your own equipment and substantially reduces your overall telecommunications costs.

Key Advantages

- **Flexible Configuration:**
  FCC provides flexible, customized solutions that make the best use of your wireless or wired network. We work hard to ensure that your trailer setup is easily reconfigurable and hassle-free.

- **Single Project Fee:**
  Outsourcing our services to you means no hourly charges, no monthly bills, no rushed jobs, and fewer disappointments. With FCC, you get a single project fee that is agreed upon up front.

- **Managed Vendor Services:**
  FCC offers simplified vendor management services. This single point of accountability provides you with time and costeffective consistency of telecommunication providers, billing and equipment so that you can focus on your core business.

IT solutions NOW and in the FUTURE

FCC
CONSULTING SERVICES

Construction Site Digital Security

To protect the resources and valued assets at your local or remote building sites, commercial businesses and residential properties, you want a complete surveillance solution. FCC Consulting Services (FCC) addresses your site's security concerns and provides a comprehensive, realtime monitoring and surveillance solution that captures and transmits live, digital images to your personal computer via a standard Web browser.

For more information or to find out how we can help you with your technology needs, contact us:

FCC Consulting Services
184 S Broad Street
Trenton, NJ 08608

Computerized Security and Surveillance

FCC along with its partners provide computerized security and surveillance solutions that allow you to continually monitor and record live activity at multiple sites remotely. Whether your needs are strictly equipment or require the design and installation of intrusion detectors or a call system, we offer discrete, turnkey solutions that can be mounted upon existing structures; including scaffolding, tower cranes and stairwells; transmitted to a receiving PC anywhere in the world.

Open Eye Digital Recording System

To keep a watch over work progress or valuable equipment or site property, we use Open Eye Digital Recording (DR) Systems that utilize the most advanced digital video compression technologies. Open Eye DR Systems provide high quality picture and video performance over a WAN, LAN, telephone or Internet connection.

Experienced, Adaptable Service

At FCC, each system is custom-built to your organization's requirements and specifications. Our staff of experts can install and service the system you need, depending on the situations and areas that you want to address. In addition, we can easily adapt camera locations as needs progress and your visual monitoring needs change.

Key Advantages

- Engage in live remote viewing and playback of recorded surveillance video via any Local Area Network (LAN) or the Web.
- Record high-resolution digital images for a period of 20-60 days, or for a longer period, using standard resolution.
- Rapidly retrieve recorded incidences by date and time without the need to spool through hours of recordings.
- Remotely monitor, control and manage intrusion devices, surveillance, access control and more.

FCC
CONSULTING SERVICES

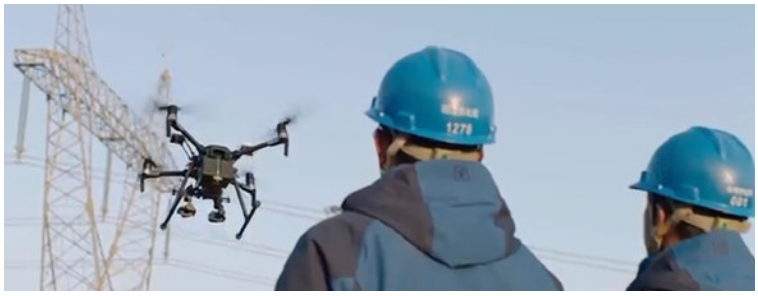
Infrastructure Inspections

Remote Aerial Surveys provide inspections of towers, factory roofs, power-line and other structures using our UAV mounted cameras. Our UAVs use a range of powerful cameras (thermal) which deliver high resolution photographs or videos which can be studied in real time or at a later date.

We offer a range of different audits from simple photography for routine inspection and maintenance to highly sophisticated 3D models of assets which can be manipulated and viewed from an internet browser and shared with colleagues or contractors.

Our Services

- Insurance Claims
- Power-Line Inspections
- Tower Inspections
- Real Estate Audits



Low-Cost Value-Add

Ability to provide quality information to drive corporate efficiency.

Ability to quickly highlight issues via our thermal images and moisture & mold technologies.

Ability for ground staff to focus on resolving problems rather than searching for them.

Real-Time Inspections

Our live feed of your assets allows for repair teams to more accurately target problem areas.

Commercial or residential roof inspections from UAVs provides the capability for flagging issues quickly and providing management with the data to develop an effective priority list.

More frequent routine inspection maintenance allows for prompt attention to issues thereby reducing production downtime.

Quality Imaging

Providing accurate information is critical for planning, repair and maintenance.

Identification of areas of excessive heat loss, mold and vegetation growth.

Development of custom close-out packages for audits and debris removal.

FCC
CONSULTING SERVICES

Roof Inspections

Thermal Infrared Roof Inspection Services by FCC IT provides thermal infrared roof inspection services on any roofing system nationwide. We use top of the line FLIR VUE and FLIR VUE Pro Thermal Infrared cameras mounted on our UAV's to provide the most accurate and technologically advanced Thermal Infrared Roof Inspection Sevice in the USA. Our Thermal Infrared Roof Inspection Includes:

- Thermogram and photograph of entire roofing area
- High quality thermal video of the roof
- Report highlighting areas of possible leaks and damages
- Certification of report for use in insurance claims, home inspection reports and lawsuits

Proven Response

Drones have proven themselves to be a valuable tool for home inspectors. They provide a safe and effective method to gather high definition imagery of roofs where damage and insulation degradation can occur.

Beyond Just Picture

Beyond visual imaging, We utilize thermal technology to identify water damage, faulty electrical components ensuring your roof is secure, underwater sense, energy-efficient, and within code compliance and within insurance requirements.

Our Services

Debris volume - Mold detection - Corrosion - Water Damage - Leaks - Staining - Missing buckling, or curled shingles - Improper sealing - Structural damage - Gutter - Weather damage - Estimates on the spot

- INSURANCE CLAIMS
- DEBRIS CONFIRMATIONS
- AERIAL PHOTOGRAPHY
- PROPERTY INSPECTIONS
